Introduction

SharpEagle Forklift Safety Lights improve visibility in high-risk work areas by clearly signaling moving forklifts, helping prevent collisions with pedestrians, vehicles, and infrastructure—delivered through a complete end-to-end solution covering assessment, design, installation, and ongoing support.

About Us

Since 2009, SharpEagle has been a trusted partner for industrial safety solutions, delivering reliable forklift and MHE safety systems engineered for demanding operational environments.

With a strong presence across the Middle East, India, and the UK, we combine international safety standards with local expertise to deliver compliant, dependable, and purpose-built solutions.

installation

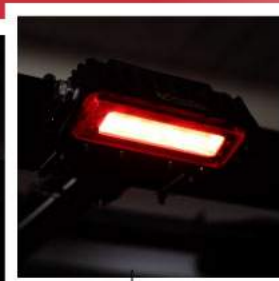

Here's a safer, ultra-clean version using only 2 widely accepted, authentic stats, written in conservative brochure language.

Industry Problems & SharpEagle Solutions

- Limited visibility in forklift operating areas creates blind spots and increases collision risk OSHA safety data indicates that a significant share of forklift incidents involve pedestrian interaction
- Forklift-related incidents lead to injuries, downtime, and damage to infrastructure Industry safety reports estimate that forklift accidents cost employers over \$100 million annually in injury and productivity losses
- Gaps in safety measures increase audit and compliance exposure
- Reactive safety practices allow hazards to remain unaddressed
- Multiple vendors often result in poor system integration and inconsistent support

How SharpEagle Solves This

- High-visibility forklift safety lighting to improve awareness
- Clearly defined visual warning zones for pedestrians and operators
- Safety solutions aligned with recognised industrial safety guidelines
- Risk-based safety planning tailored to site conditions
- End-to-end delivery covering assessment, design, installation, commissioning, and after-sales support

Result

Improved visibility and situational awareness

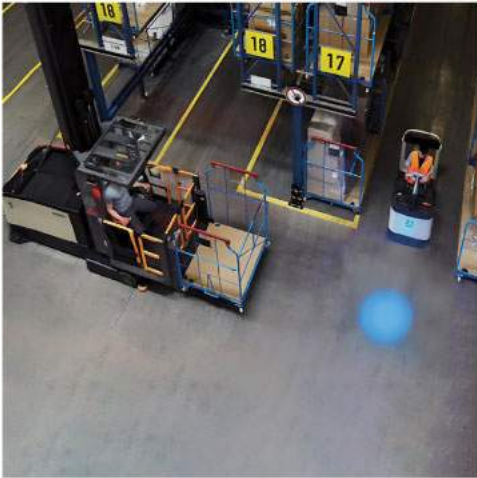

Reduced likelihood of collisions and near-miss incidents

Better compliance confidence

Reliable, long-term system performance

Model No
SE-01-010 SSL

[More Info](#)

Forklift Spot Safety Light

A high-intensity spotlight mounted on forklifts, projecting a visible beam on the ground to warn pedestrians, highlight danger zones, and enhance safety during warehouse and industrial operations.

Model No
SE-01-011 DL

[More Info](#)

Forklift Danger Light

A powerful visual warning light mounted on forklifts, projecting bright beams onto the floor to alert pedestrians, mark danger zones, and reduce collision risks in busy industrial environments.

Model No
SE-01-012 ASL

[More Info](#)

Forklift ARC Safety Lights

A forklift-mounted arc safety light projects a bright, curved beam on the ground, creating a visible warning zone that alerts pedestrians, prevents accidents, and enhances operational safety.

Model No
SE-01-014 WL

[More Info](#)

Forklift Warning Beacon Light

A forklift-mounted beacon light emits bright, flashing signals to alert pedestrians and nearby workers, enhancing visibility, preventing accidents, and ensuring safer operations in warehouses and industrial environments.

Model No
SE-01-008 LGS

[More Info](#)

Forklift Laser Guided System

A forklift-mounted laser guidance system projects precise beams to indicate fork alignment, helping operators position loads accurately, reduce handling errors, and improve safety in fast-paced warehouse operations.

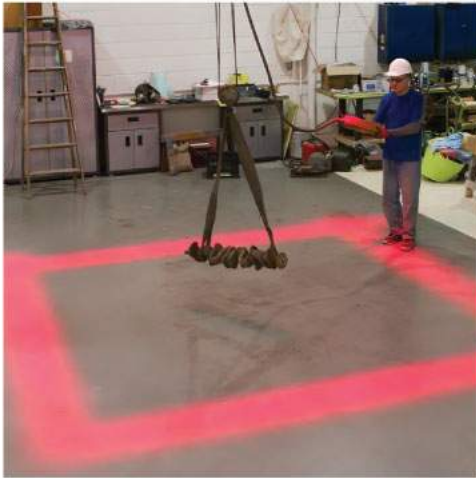

Model No
SE-01-015 CSL

[More Info](#)

Overhead Crane Spot Light

An overhead crane-mounted spotlight projects a focused circular beam on the floor, marking load positions, guiding operators, alerting ground workers, and preventing collisions in busy industrial environments.

Model No
SE-01-015 CLL

Overhead Crane Linear Light

An overhead crane-mounted linear light projects a long, bright beam on the floor, clearly marking the crane's path, improving visibility, guiding operators, and preventing collisions in industrial environments.

[More Info](#)

Model No
SE-01-017

Safe Zone Corner Guard

A corner-mounted safety guard with bright visual indicators creates a visible safe zone, alerting workers at blind spots, preventing collisions, and ensuring safer movement in warehouses and industrial sites.
