Introduction

SharpEagle Forklift & MHE Safety Solutions enhance visibility and control in high-traffic areas, helping reduce accidents and improve operational safety. We deliver complete end-to-end safety solutions—from site assessment and system design to installation and ongoing support.

About Us

Since 2009, SharpEagle has been delivering industrial safety solutions engineered for real operating environments.

With regional presence across the Middle East, India, and the UK, we support customers with reliable systems, consistent service, and long-term commitment.

installation

Industry Problems & SharpEagle Solutions

- Limited visibility in forklift and MHE operating zones creates blind spots and collision risk OSHA safety data shows a significant share of forklift incidents involve pedestrian interaction
- Forklift-related incidents lead to injuries, downtime, and damage to infrastructure Industry safety reports estimate forklift accidents cost employers over USD 100 million annually in injury and productivity losses
- Inconsistent safety measures increase compliance and audit exposure
- Reactive safety practices allow hazards to remain unaddressed
- Multiple vendors result in poor integration and unreliable after-sales support

How SharpEagle Solves This

- High-visibility forklift and MHE safety lighting to improve awareness
- Clearly defined visual warning zones for pedestrians and operators
- Safety solutions aligned with recognised industrial safety guidelines
- Risk-based site assessment and solution design
- Single-partner, end-to-end delivery covering assessment, design, installation, commissioning, and after-sales support

Result

Improved visibility and situational awareness

Reduced likelihood of collisions and near-miss incidents

Stronger safety compliance confidence

More reliable operations with long-term support

Model No
SE-04-003

AI Forklift CCTV Solutions

AI-powered forklift camera with onboard DVR and pedestrian detection, delivering real-time operator view, alerts, and incident recording to improve visibility, reduce collisions, and support compliance.
